TECHNICAL SKILLS

Backend: Java, Spring Boot, Spring Security & JWT, Hibernate/JPA, Node.js, Express.js, REST APIs, JUnit, Mockito, Caffeine, Redis

Frontend: HTML5, CSS3, Tailwind CSS, Javascript, React.js

Databases: PostgreSQL, MySQL, MongoDB

Cloud: AWS IAM, AWS VPC, AWS EC2, AWS S3, AWS CLI

AI/APIs: Google Gemini API, RESTful Integration

Tools & Technologies: Git, GitHub, Linux, Docker, Maven

Core CS: Data Structures & Algorithms, OOP

SUMMARY

Experienced Java Backend Developer with 9 months of experience in backend application development, specializing in Java, Spring Boot, Spring Security, Hibernate, and RESTful APIs, with a strong foundation in Data Structures and Algorithms. Familiar with core AWS cloud services including IAM, VPC, EC2, S3, and CLI. Proven ability to design secure, scalable backend solutions and collaborate in Agile teams to deliver production-ready applications. Eager to contribute to building high-performance, cloud-ready software that delivers business value.

EXPERIENCE

Java Backend Developer (Intern → Full-time) – Insonsoft Pvt. Ltd.

Sep 2025 – May 2026

Java, Spring Boot, Spring Security, Hibernate, PostgreSQL, JWT, REST APIs, React, Git

- Earned **promotion from Intern to Full-time Java Backend Developer within 9 months** by consistently delivering production-ready backend features and demonstrating strong technical ownership across enterprise Java applications.
- Designed and developed secure RESTful APIs for **15+ core modules** using **Java, Spring Boot, Spring Security, Hibernate/JPA, and PostgreSQL**, implementing **JWT-based authentication** and **Role-Based Access Control (RBAC)** to protect sensitive data.
- Optimized database query performance by **40%** through indexing, query refactoring, unit testing components, and **Hibernate** tuning, reducing API response times and improving overall application scalability.
- Collaborated in an **8-person cross-functional team** using **Git/GitHub** and **Agile** workflows, conducting code reviews, debugging production issues, and delivering maintainable backend solutions across the **full SDLC**.

PROJECTS

E-Notes App | *Java, Spring Boot, React.js, AWS S3, AWS EC2, AWS VPC, AWS Auto Scaling, AWS ELB, Docker, JWT, OAuth*

- Built a secure notes application using **React** and **Spring Boot**, with **JWT authentication**, **OAuth 2.0** login (Google, GitHub), and **role-based access control (RBAC)**.
- Integrated **AWS S3** for file upload and storage, enabling secure, user-specific document management with scalable cloud storage.
- Deployed on **AWS** using **Docker** containers within a **VPC**, configuring **Auto Scaling** and an **Application Load Balancer** for high availability.

AI IT Job Portal | *Java, Spring Boot, Spring Security, PostgreSQL, JWT, React.js, Google Gemini API*

- Built a multi-role job portal (Candidates, Recruiters, Admins) with **AI-powered profile setup** using **Google Gemini API** to parse resumes and auto-extract candidate details.
- Developed an **AI-driven auto-apply system** using **Gemini API** to compute a **job-candidate match score** and auto-apply based on configurable thresholds.
- Implemented secure authentication with **email OTP verification** and role-based dashboards for candidates, recruiters, and admins, with optimized backend query performance.

Chat Verse - Real-Time Communication Platform | *Java, Spring Boot, WebSocket, STOMP, React.js*

- Built a WhatsApp-style real-time messaging platform using **WebSocket** and **STOMP protocol**, supporting concurrent connections for **up to 10 simultaneous users** with secure authentication.
- Designed persistent chat history storage and implemented one-to-one messaging with reliable message delivery across concurrent WebSocket sessions.

EDUCATION

Bachelor of Engineering in Information Technology (B.E.)

Sep. 2022 – June 2026

Savitribai Phule Pune University

– **8.01 CGPA**

CERTIFICATES / EXTRACURRICULAR

Data Structures and Algorithms: Built a strong foundation in Data Structures and Algorithms. [Certificate](#)
